Project Overview

Smart Grocery Management System is a mobile application designed to help users efficiently manage their grocery inventory by tracking expiration dates, suggesting recipes based on available ingredients, and alerting users of food recalls. The project aims to reduce food waste, save money, and enhance household food organization through an intuitive and automated system. The core functionalities include barcode scanning for easy item input, real-time expiration tracking, and integration with food safety APIs for recall alerts.

Our team, consisting of two members, divided responsibilities between authentication and inventory management. The goal is to create a seamless grocery tracking experience while learning full-stack mobile development.

Tools

Software & Frameworks:

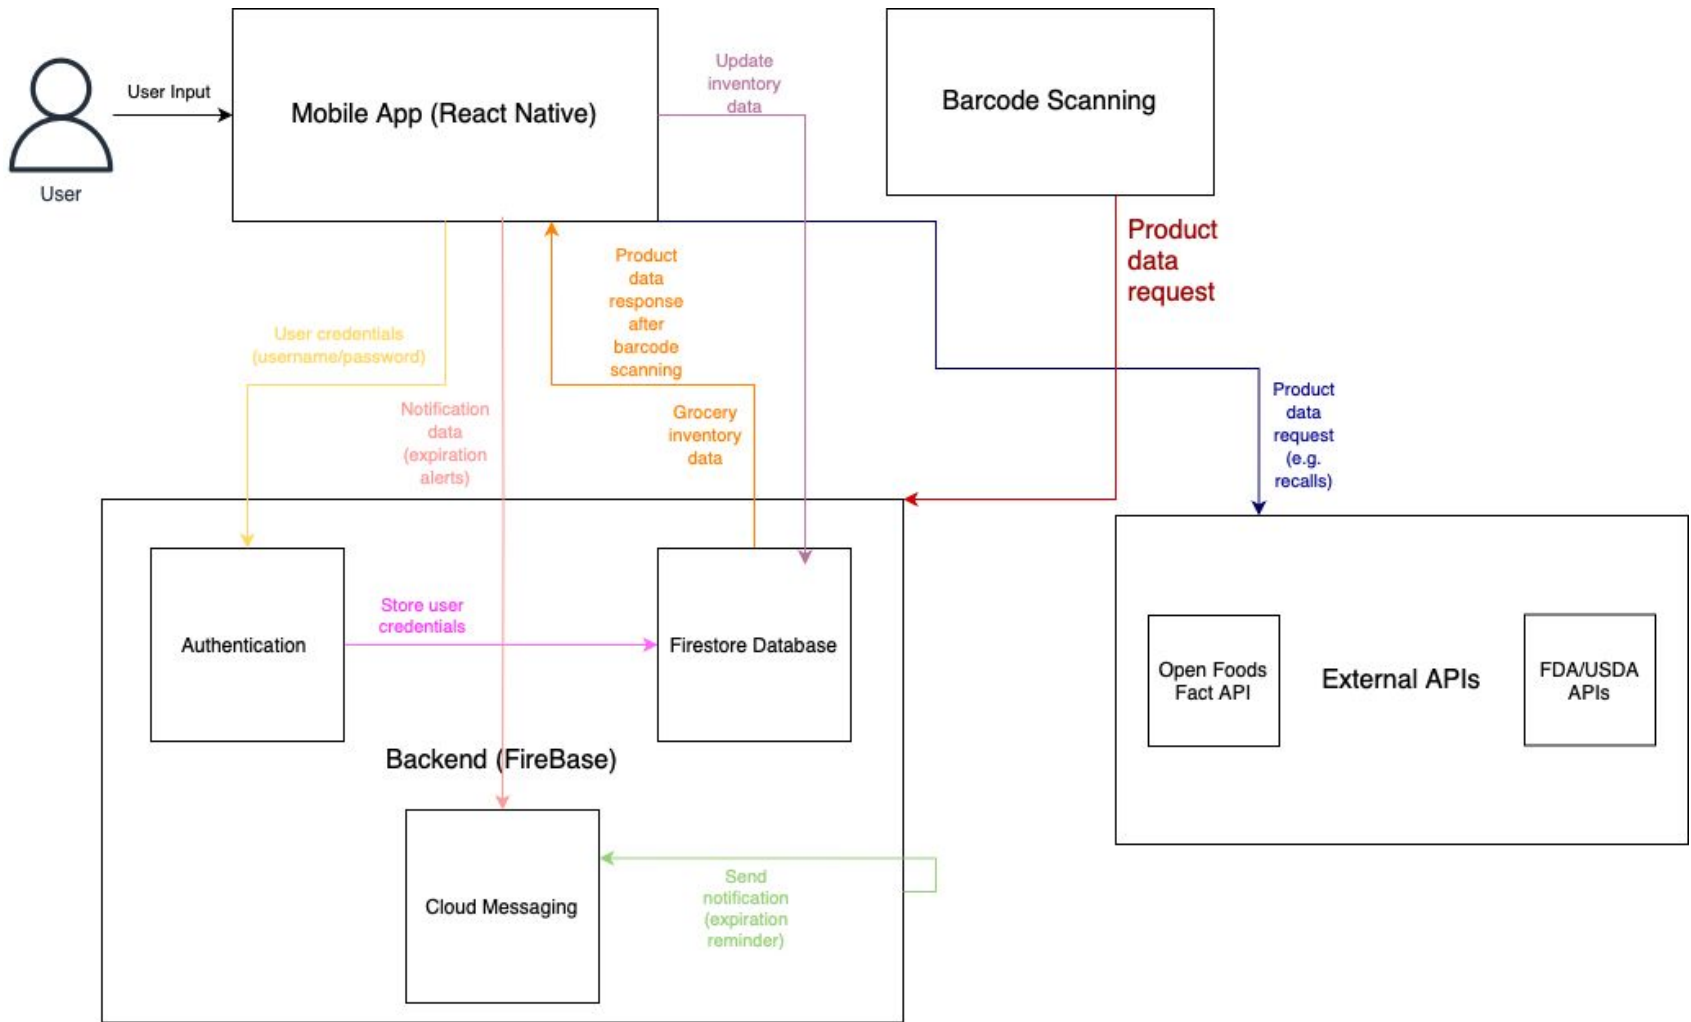

- React Native (Latest Version) for cross-platform mobile development
- Firebase Authentication & Firestore Database for backend services
- OpenAI API for potential NLP-related features
- FDA/USDA & Open Food Facts API for food recall data
- React Native Camera for barcode scanning

Hardware:

- Smartphones (iOS & Android) for testing
- Development Machines (Windows/Mac) for coding

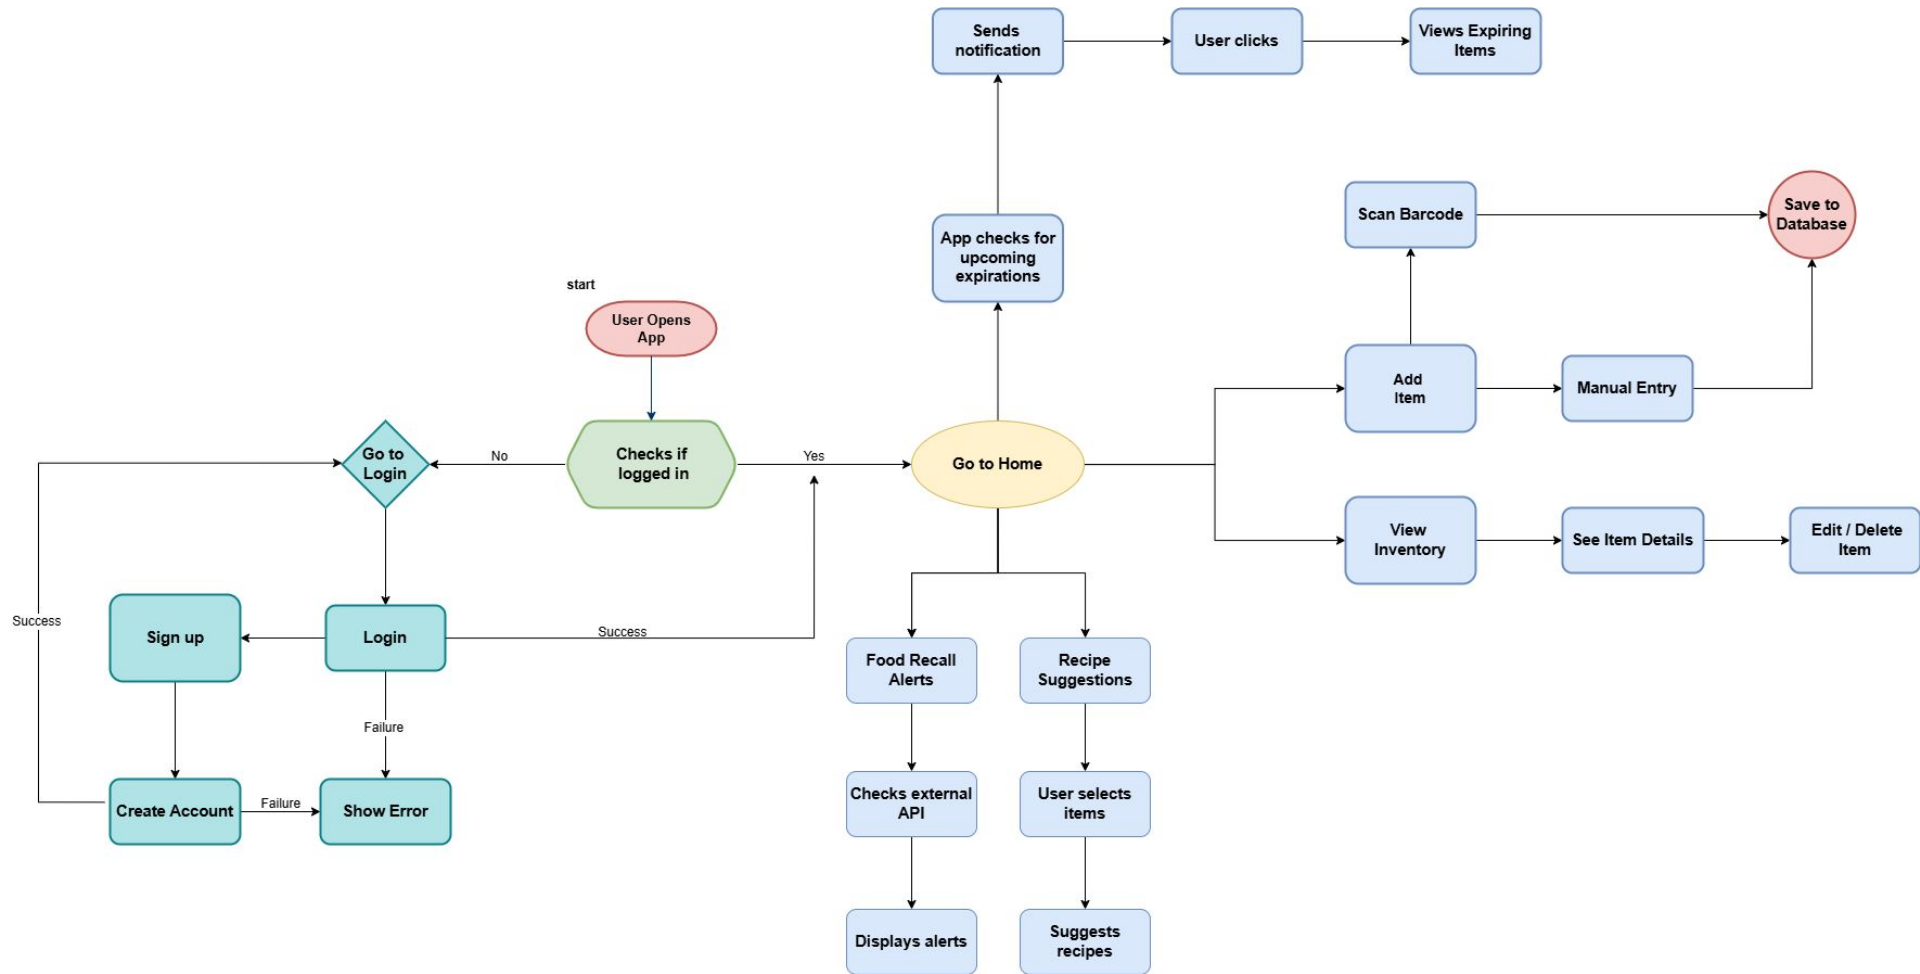

System Architecture Diagram

- Illustrates the interaction between the frontend (React Native app), backend (Firebase Firestore & Authentication), and external APIs.

User Flow Diagram

- Visualizes the user's journey from login/signup, adding grocery items, setting expiration alerts, and receiving notifications.

Wireframes (Optional UI/UX Mockups)

- Showcases the app's general layout and design. It includes the key screens and interactions, with some extra features planned for development if time permits.

About Smart Grocery Management App

About The App

Smart Grocery Management System is a mobile app that helps users track grocery inventory, manage expiration dates, get recipe suggestions, and receive food recall alerts. Designed to reduce food waste and save money, it features barcode scanning for easy input, automated reminders, and real-time food safety updates.

Tentative Schedule

WEEK	TASK	ESTIMATED TIME
Feb 10 - Feb 16	Setup Development Environment, Learn React Native & Firebase	1 week
Feb 17 - Feb 23	Finalize MVP Features, Setup Development Environment, Learn React Native & Firebase	1 week
Feb 24 - Mar 9	Core Features Development	2 week
Mar 10 - Mar 23	Core Features & Testing & Presentation Prep	2 week
Mar 24 - Apr 6	Feature Refinement & Demo Preparation	2 week
Apr 7 - Apr 20	Final Testing, Debugging	2 week
Apr 21 - May 5	Final Demo Recording & Submission	2 week
May 6 - May 12	Final Review & Submission	1 week

Data Sources

- **Inventory Data:** User-inputted grocery items with expiration dates.
- **Food Recall Data:** FDA/USDA APIs & Open Food Facts database.
- **Recipe Suggestions:** Basic rule-based system with OpenAI API for NLP-enhanced recommendations.

Use Cases

1. User Authentication

- **Input:** Email/password signup or Google Authentication.
- **Process:** Firebase Authentication verifies credentials.
- **Output:** User gets access to the app dashboard.

2. Inventory Management

- **Input:** User scans barcode or manually enters item details.
- **Process:** System saves item data to Firestore.
- **Output:** Item appears in inventory list with expiry tracking.

Use Cases

3. Expiration Alerts

- **Input:** System checks stored items for approaching expiration dates.
- **Process:** Sends push notification reminders to the user.
- **Output:** User receives alerts and can take necessary action.

4. Edit/Delete Inventory Items

- **Input:** User taps item from list
- **Process:** Pre-filled form opens → User edits or deletes
- **Output:** Firestore updates or removes the item

Team Roles & Workflow

We split the project between two collaborators:

- **Zarina:** Inventory features, Firestore CRUD, expiration alerts, UI/UX decisions
- **Sena:** Authentication flow, Firebase Auth, Google login, Barcode Scanning

We collaborated through GitHub Project Board, weekly check-ins, and code reviews to ensure cohesion and progress.

System Design

- We designed a modular system using React Native for the frontend and Firebase Firestore as the backend.
- The system integrates multiple external APIs for enhanced functionality:
 - FDA/USDA & Open Food Facts for recall alerts
 - OpenAI for future recipe suggestions
- We also created diagrams such as:
 - System Architecture Diagram to show the flow of data between app, database, and APIs
 - ER Diagram to illustrate how inventory and users are related
- Our division of labor made it easier to maintain a clean architecture with separated concerns.

Programming Skills

- Together, we wrote mobile app code using JavaScript and React Native.
- Our codebase includes:
 - **CRUD operations** for inventory data with Firestore
 - **Authentication logic** using Firebase Auth
 - **Date picker integration** and conditional rendering of alerts
- Debugging sessions and real device testing helped us polish cross-platform issues.
- Code was version-controlled through GitHub with regular commits and issue tracking.

Algorithm Efficiency

- We evaluated the efficiency of our expiration alert system:
 - Filtered upcoming expirations based on date differences
 - Minimized unnecessary reads by narrowing Firestore queries
- Future optimization plans include:
 - Indexing fields for faster Firestore queries
 - Debouncing user input for search/filter features
- Our priority was balancing responsiveness with low battery and data usage on mobile devices.

Integration of CS Concepts

- This project involved combining knowledge from multiple CS domains:
 - **Databases:** Firestore schema design and ER modeling
 - **Software Engineering:** Version control, modular structure, backlog/task management
 - **Mobile App Development:** Platform-specific issues and UI layout for small screens
 - **User-Centered Design:** Focused on making the app intuitive and efficient
- Working across these areas helped us deliver a cohesive, well-rounded product.

Professional Practice

- We practiced team communication, scope management, and planning:
 - Weekly team meetings to discuss blockers and progress
 - Used GitHub Projects to organize our sprints and features
- Documentation included time logs, code comments, and presentation prep
- Our workflow followed principles of **Agile** development in a simplified, academic setting

GitHub Repository

The screenshot shows a GitHub repository page for 'Smart-Grocery-Management-System' by user 'orucusena'. The repository is public and has 12 issues, 1 pull request, and 18 commits. The main branch is 'main'. The repository contains several files and folders: 'app', 'assets', 'components', 'constants', 'hooks', 'scripts', and 'citizenpro'. The 'About' section is empty, and the 'Releases' section shows no published releases.

Project Management Board

The screenshot displays a Project Management Board for the project "CISC.4900_Group55". The interface is dark-themed and includes a top navigation bar with a search bar and user profile. Below the navigation bar, there are tabs for different views: Backlog, Priority board, Team items, Roadmap, In review, My items, and a New view button. A filter bar allows filtering by keyword or field, with Discard and Save buttons. The main area is divided into three columns: To Do, In Progress, and Done. Each column has a header with a count and an estimate. The To Do column contains four items, the In Progress column contains four items, and the Done column contains four items. Each item is a card with a title and a description.

Navigation Bar:

- Menu icon
- Profile icon: orucusena
- Breadcrumbs: / Projects / CISC.4900_Group55
- Search bar: Type / to search
- Icons: Add status update, Add, Edit, Share, Print, User profile

Project Header:

- Project Name: CISC.4900_Group55
- Buttons: Increased items preview, Feedback
- Buttons: Add status update, View icons

View Tabs:

- Backlog (selected)
- Priority board
- Team items
- Roadmap
- In review
- My items
- + New view

Filter Bar:

- Filter by keyword or by field
- Buttons: Discard, Save

Columns:

- To Do (7 items, Estimate: 0):**
 - Smart-Grocery-Management-System #14: Recipe Suggestions (Optional)
 - Smart-Grocery-Management-System #15: Food Recall Integration (Optional)
 - Smart-Grocery-Management-System #16: Testing & Debugging
 - Smart-Grocery-Management-System #17: Demo Recording 2
- In Progress (4 items, Estimate: 0):**
 - Smart-Grocery-Management-System #5: Continue Learning React Native
 - Smart-Grocery-Management-System #10: Inventory Management Development
 - Smart-Grocery-Management-System #11: Barcode Scanning Implementation
 - Smart-Grocery-Management-System #18: Presentation Slides (First Draft)
- Done (10 items, Estimate: 0):**
 - Smart-Grocery-Management-System #2: Set Up Development Environments
 - Smart-Grocery-Management-System #3: Learn React Native Basics
 - Smart-Grocery-Management-System #7: Start Inventory Management Feature
 - Smart-Grocery-Management-System #8: Deliverable: Project Tools Form & Live Presentation Scheduling
